

I'm not robot!

Fully automatic machine Reduced technical times Suitable for filtering corrosive and abrasive products Plate shaking system Low pressure and high pressure cloth washing system The filtering plates, sliding on the side beams of the ME filter press, are connected to each other (and the mobile header) allowing a quick "accordion" opening. Opening of the plate pack obtained by the movement of the mobile header Fixed and/or photocell side protections Low pressure washing system (for size 2.000 x 2.000 mm with jets on 4 points of the plate) High pressure cloth washing system PLC (HMI - Human Machine Interface) Home » Prodotti » Filtro presse DIEMME SOIL WASHING realizza impianti stazionari e mobili di filtrazione su semirimorchio oppure su skid, per soddisfare le esigenze di mobilità nelle attività di separazione solido-liquido. Una ampia gamma di filtro presse è prodotta nelle seguenti versioni: UBF a trave alta, FPS ad apertura simultanea - Unmanned Filter, APS automatiche e MPS manuali. L'ampia gamma di macchine, la versatilità data dalle diverse combinazioni di dimensione delle piastre, dalla possibilità di usare camere a volume fisso o a volume variabile e telai a trave laterale o trave alta con un sistema di chiusura idraulico in spinta o in tiro, fanno di DIEMME SOIL WASHING il partner ideale per affrontare qualsiasi esigenza nel campo della separazione solido - liquido. Le filtro presse progettate e fabbricate da DIEMME SOIL WASHING si differenziano per il grado di automazione ottenibile, dal manuale fino al totalmente automatico. Categories Catalogues Expert advice SOS Suppliers Home » Products » Filter presses » Filtro presse manuali DIEMME SOIL WASHING with a tradition of group and highly qualified personnel in the field of solid-liquid separation almost secular, produces Filter Presses for various industrial sectors, with customized solutions for the specific needs of its customers. The wide range of machines, the versatility given by the different combinations of plate sizes, the possibility of using fixed volume or variable volume chambers and side beam or upper beam frames with a hydraulic closing system in push or pull type, make DIEMME SOIL WASHING the ideal partner to face any requirement in the field of solid - liquid separation. The Filter Presses designed and manufactured by DIEMME SOIL WASHING differ in the degree of automation that can be obtained, from manual to semi-automatic up to fully automatic. The MPS model is available with a plate size from 500x500 mm and is mainly characterized by having a frame with manual or motorized hydraulic closing control unit and the manual movement of the plates during the opening phase. Available with fixed volume concamerated chamber plate or variable volume membrane plate pack or with plates and frames. The filtration phase can be completely automated and is suitable for complex processes with high added value. Filter cloth kit specifically designed for the type of product to be filtered. Plates and frames with filter cardboard. Given the manual nature of the plate pack opening and panel unloading operations, it is particularly suitable for small productions, even special ones or in cases of high flow rate and long lasting filtrations. Diemme Filtration has the widest range of filters available on the global market in terms of size, design and technical characteristics. The equipment is tailor made and designed according to the specific application. Diemme also began to design and supply its own range of High Rate thickeners, thus broadening the company's scope of supply and giving more support to the customer. Being aware that our systems contribute to make more sustainable the industries in which we operate through the recovery of water, the reduction of pollution risks and the reduction of energy consumption, strongly motivates us to continue on the path of continuous innovation undertaken long ago. Every year, in fact, our engineers validate new ideas, study alternative solutions or develop new products for sludge disposal. This constant commitment, combined with the experience gained over the years, allows us to accompany our customers with extreme confidence from the identification of the problem to the implementation of the solution, confident that we can provide them, in every corner of the world, complete installation that represents the state of the art in the field of dewatering engineering. Innovative systems for automated quality filtration of juice and wine with small energy consumption, low environmental impact and maximum respect for the organoleptic characteristics of the product.
